🎯 Objective

First-year Computer Science student focused on building practical software projects and strengthening problem-solving skills. Interested in software development, data analysis, and systems programming.

💻 Skills

- **Languages: C, C++, Python**
- **Libraries/Tools: Pandas, NumPy, Matplotlib, Seaborn, Tkinter**
- **Concepts: Data Structures (basics), OOP, File Handling**
- **Tools: Git, GitHub, VS Code**

🚀 Projects

Weather Data Analysis System (Python)

- **Built a data analysis tool to clean, process, and visualize weather datasets**
- **Implemented statistical analysis (averages, trends) using Pandas and NumPy**
- **Created visualizations including bar plots, scatter plots, and heatmaps using Matplotlib and Seaborn**
- **Developed a Tkinter-based GUI for user interaction**

Banking System (C)

- **Developed a console-based banking system with file-based data persistence**
- **Implemented account creation with auto-generated account numbers and PIN authentication**
- **Built transaction features including deposit, withdrawal, and fund transfer**
- **Designed a rollback mechanism to maintain data consistency during transactions**

🏆 Achievements

- **Participating in hackathons and coding events**

- **Actively building and deploying personal projects on GitHub**

🎓 Education

B.Tech in Computer Science (1st Year)
MIT WPU, Pune

🤝 Interests

- **Software development**
- **Data analysis**
- **Systems programming**
- **Competitive programming (beginner)**
